

KENTUCKY OPERATOR CERTIFICATION NEWSLETTER

NOVEMBER 2009

Operator Certification Regulations – Amended After Comments

On Oct. 14, 2009, the Kentucky Division of Compliance Assistance filed proposed amended after comments regulations and the statement of consideration with the Legislative Research Commission. A copy of the regulations will be available after Nov. 1, on the program's Web page located at www.dca.ky.gov/certification.

There were a number of minor revisions made to the proposed regulations filed in July. One significant revision was a change to the proposed Operator in Training (OIT) designation. The original proposal only applied the OIT designation to Class I drinking water operators. The amended after comments regulation has now expanded the OIT designation to all certification levels for all classification types.

This designation will allow individuals without experience to take an examination, and if they pass, they then can operate under a "probationary license." The operators would only be eligible to be an OIT for the same certification type and one level greater than the certification that the individuals currently hold. For example, certified operators with a Class II-D certification could not apply for the Class IV-D OIT because this would be two classification levels higher than their existing certification. However, if those same operators held a Class III-D certification, they could apply for the Class IV-D OIT certification.

All operators with an OIT designation must work under the mentorship of another certified operator who works at the same facility as the operator holding the OIT certification. Operators with an OIT designation will not be permitted to be in responsible charge of a facility. The only exception is for wastewater Class I-OITs who own a home unit servicing one household.

When individuals apply to take a certification examination for an OIT designation, the applicants must also submit a letter from a certified operator that will be mentoring the OITs. The letter from the certified operator must indicate a commitment to be the OITs' mentor while the individual is employed at the facility and holds an OIT certification. Certified operators are only allowed to mentor one OIT at a time. The mentor must be certified at a level equal to or greater than the level required for the size of the system where the mentor is an operator.

OIT designations expire on the same schedule as a certification. OITs are required to obtain continuing education hours to maintain their OIT designation. In addition, if the OITs have not earned sufficient experience to become certified operators without the OIT designation prior to the expiration of the OIT certification, the OITs must retake and pass the certification exam if they wish to remain OITs. If OITs earn sufficient experience to take an exam for a certification without the OIT designation, the operators may apply to do so at any time. OITs who have earned sufficient experience to take an exam for a "normal" certification may convert their certification without having to retake the exam as long as the OITs submit a letter from their mentor recommending that their OIT designation be removed and a "normal" certification be awarded.

The revised regulations will be reviewed by the Administrative Regulation Review Subcommittee on Nov. 10, 2009. It will be reviewed by the Interim Joint Committee on Agriculture and Natural Resources in December. The division anticipates that the regulations will be approved and become effective in December.

Update on DOW's Drinking Water Program

The Drinking Water program is working on several new and challenging issues that relate to operation, maintenance and management of water systems. Division of Water (DOW) staff members are working closely with the Public Service Commission to develop a single “water loss” form that can be used by all water systems in the state, regardless of the regulating authority. That form will also include calculations for the “cost of water produced” that will assist systems in determining revenue associated with lost water, as well as set appropriate rates. Capacity Development staff members continue to work on incorporating its strategy into proactive regulatory language.

Revisions to 401 KAR Chapter 8 are almost complete. While the main focus has been on referencing the federal drinking water language, the DOW has also taken the opportunity to revise the Engineering Design Criteria, enhance the laboratory certification program and update the plant staffing requirements.

Several Clean Water Act regulations may impact water systems, specifically the lower limits on wastewater plant phosphate levels and the inclusion of anti-degradation requirements for treatment plant discharges to waters of the Commonwealth (such as spent filter backwash water). Lower phosphate levels at the wastewater plants may mean tighter control of corrosion inhibitor levels. Anti-degradation will not allow lowering the water quality of a receiving body of water and may mean new limits and performance standards on the Drinking Water General Permit.

The sanitary survey process will be expanded in 2010 to include groundwater systems (both producers and purchasers). The initial year for groundwater systems will focus on approximately 46 systems that serve 100 people or less. The DOW has 162 sanitary surveys scheduled for the time period of October 2009 through September 2010.

The success of the Area-wide Optimization Program's (AWOP) initial disinfection by-product Performance-Based Training (PBT) in eastern Kentucky means a second PBT will begin in early 2010 for applicable systems on the AWOP ranking list.

Certification Program Staff Profile

Steve Crosman

Steve Crosman is a trainer in the drinking water operator certification program. He provides continuing education to the dedicated men and women who work diligently to ensure that drinking water for citizens of the Commonwealth is safe.

Steve has more than 20 years' experience in the water and wastewater fields. From 1993 until 2006, he was the maintenance supervisor for the city of Lawrenceburg. He possesses a Class IV distribution license and a Class I wastewater license. Steve is a certified backflow prevention analyst and also has a Class I drinking water lab analyst certification.

Wildlife Exposed to Pharmaceuticals in Water

(From CNN.com) -- A number of aquatic and amphibian species are being exposed to small amounts of everything from Prozac to perfume to birth control pills that make their way into U.S. rivers and streams.

And scientists now have evidence that this “cocktail” of pharmaceuticals, in high enough quantities, can lead to problems that may be serious enough to prevent wildlife from reproducing. It’s not yet clear how the buildup over time could affect the species.

In 2002, 80 percent of streams sampled by the U.S. Geological Survey showed evidence of drugs, hormones, steroids and personal care products such as soaps and perfumes. The U.S.G.S. tested 139 rivers in 30 states.

To give an idea how many drug remnants make their way into ponds, creeks and streams, after being passed through humans, sent into sewer systems and released from wastewater treatment plants:

More than 61 million prescriptions for antidepressants were prescribed by U.S. doctors in 2001, according to the National Center for Health Statistics at the CDC. Because prescriptions like anti-depressants are for chronic conditions, patients often take them for months and years at a time, making them more likely to build up in wastewater

Researchers are working on several fronts to determine how big the problem is and just what short- and long-term ecological effects there might be on wildlife.

Training Schedules for Remainder of 2009 and First Quarter

Dec. 8-10, 2009	Dale Hollow SRP	Collection Cert. School (WW 6322)	WW	12 hrs
Dec. 9-10, 2009	Carter Caves SRP	Regulations (DW 6309)	DW	12 hrs
Dec. 15-18, 2009	General Butler SRP	Surface Water Treatment Cert. School (DW 6310)	DW	18 hrs
Jan. 5-8, 2010	DEP Training Center 300 Fair Oaks Ln., Frankfort	Distribution Cert. School (DW 7486)	DW	18 hrs
Jan. 11-13, 2010	General Butler SRP	Collection Cert. School (WW 7513)	WW	12 hrs
Jan. 20-21, 2010	Natural Bridge SRP	Alternative Disinfection (DW 7487)	DW	12 hrs
Jan. 20-22, 2010	DEP Training Center 300 Fair Oaks Ln., Frankfort	Collection Cert. School (WW 7514)	WW	12 hrs

Note : Hours earned prior to initial certification do not count toward certification renewal.

Division of Water Scientist Receives Prestigious Award for Expertise in Drinking Water Supply

Julie Roney, an environmental scientist with the Kentucky Division of Water (DOW), has been named the recipient of a George Warren Fuller award for distinguished service to water utilities by the Kentucky-Tennessee Section of the American Water and Wastewater Association (AWWA). She is only the third woman to be selected for the award by the Kentucky-Tennessee Section since 1938.

The George Warren Fuller Award is presented annually to 43 members of the American Water and Wastewater Association nationwide in recognition of “sound engineering skill, brilliant diplomatic talent and constructive leadership” that characterized the life of Fuller, according to the AWWA Web site.

In presenting the award, AWWA Vice President Dean Fritzke praised Roney for her dedication and expertise.

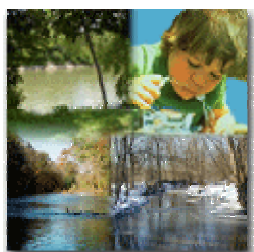

“[Julie Roney] is one of the most respected water professionals in the state of Kentucky because of an impressive level of knowledge and experience as well as a total willingness to share that knowledge with others,” Fritzke said.

Roney has 29 years of environmental experience, 22 of which have related to drinking water. As a staff member of DOW for more than ten years, Roney advises public water utilities on water quality and technical issues. A frequent speaker at water industry training events, Roney believes that continuing education is key to effective water utility management.

“Water utility operators – especially at small public facilities – look to us at the Division of Water for information on current rules and technologies,” Roney said. “Training conferences give me the opportunity to assist operators with their day-to-day operations and help them solve problems unique to their plants, their water sources and their communities.”

Roney holds a Bachelor of Science degree in biology from the University of Kentucky as well as Class IV treatment and Class IV distribution licenses. Her previous awards include the AWWA Kentucky-Tennessee Section Distinguished Service Award and the Kentucky Water and Wastewater Operators Association’s Eugene Nichols Award.

Compiled by Allison Fleck, Division of Water.

Congratulations to all of our new licensees!

Remember, keep your license up to date. Complete the necessary continuing education hours each renewal period and renew your license by the expiration date on your wallet card.

Operators are also required to carry their wallet cards with them when they are working at their facility. Your certificate should also be posted at the facility.

E-mail List

Did you know that you can receive announcements, newsletters and other programmatic information through e-mail? This is a new service offered by the Certification and Licensing Program and you, too, can be added to the distribution list by calling 1-800-926-8111, ext. 652, or by e-mailing Julia.Kays@ky.gov.

Board Member Profiles

Each newsletter will profile two board members.

Debra Cantrell—Operator Member

Debra Cantrell serves on the Kentucky Board of Certification of Water Treatment and Distribution System Operators. She is a wastewater operator for the Beechfork Water Commission in Powell County and has served on the board since 1995. Mrs. Cantrell currently holds a Class IV A water treatment license.

Dr. Andrew Ernest—University Representative

Dr. Ernest serves as the University Representative on the Kentucky Board of Certification of Wastewater System Operators.

Andrew N.S. Ernest, Ph.D., P.E., BCEE, earned a B.S. and M.S. in Civil Engineering from the University of Southwestern Louisiana in 1985 and in 1986, respectively, and a Ph.D. in Civil Engineering from Texas A&M University in 1991. He has over 17 years of professional experience in Environmental and Water Resource Engineering. Dr. Ernest currently serves as the director of the Center for Water Resource Studies and associate dean of the Ogden College of Science and Engineering at Western Kentucky University.

Board Meeting Schedule

Both certification boards meet monthly at 300 Fair Oaks Lane in Frankfort, Ky. The meeting dates for each board can be located on the program's Web site at www.dca.ky.gov/certification. All operators are invited to attend.
